DETAILED ACTION

Allowable Subject Matter

1. Claims 1 and 4-36 are allowed.
2. The following is an examiner's statement of reasons for allowance:

None of the prior art teaches or suggests a system for mapping a network address to a network object (i.e. a network definition as advanced on page 3 paragraph 3 of the applicant's response to the Final Office Action) wherein the mapping of the network address comprises performing one or more operations on the address itself and the network object further comprises a network priority indicating an order of preference for using one *network* over another network to access the service.

References such as the patent to Pitkin et al. (USPN 5,341,477), describe a system for brokering requests where a priority is assigned to a specific service provider in order of preference of one *provider* over another. However, no reference teaches the use of one or more operations on a network object to determine a network definition that includes the network priority as defined in the instant specification and the response to the Final Office Action. For these reasons, the current claims are allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
